

JOYIN type JVR

A broad range of voltage dependant, symmetrical, metal oxide semiconductor devices (varistors) designed to protect equipment against transient voltage spikes. Connected directly across the supply rails, they offer a convenient and simple solution to transient suppression.

Epoxy coated disc construction with radial leads crimped to provide an in-line with body footprint.

N.B. A varistor remains high impedance (non-operative) during normal standby use. When a voltage spike is encountered the impedance rapidly drops to a very low level, clamping the transient voltage to an acceptable level. The varistor absorbs the unwanted energy thereby protecting voltage sensitive components against damage.

Devices with a varistor voltage above 68V now have higher surge/energy ratings

- Broad range
- Choice of voltage & energy ratings
- Fast response
- Protect voltage sensitive components against damage
- Convenient and simple solution to transient suppression
- Body colour **Gold**

Specification

Storage temperature range -40 C to +125 C
 Max. operating temperature +85 C
 Max. working surface temperature +115 C
 Response time <25ns
 Voltage coefficient/temperature -0.05%/ C
 Insulation resistance 1000M at 500V
 Insulation voltage 2500Vd.c.

 All JVR types are listed under UL file E153360 as a recognised component.

 JVR types with a nominal varistor voltage of 200V and higher have CSA approval.

SPLT

Manufacturers smallest factory pack quantity for lot integrity and traceability.
